

Santa Monica College

Student Learning Outcomes

Date: September 21, 2006

Course Name and Number: Human Anatomy (Anatomy 1)

Student Learning Outcome(s):

1. Name the systems of the human body, their general functions, the major organs that make up these systems and the general contribution each organ makes to the system.
2. Identify microscopically and describe the structure and basic function of the tissue and cell types used to make up the major organs of the human body.
